UPVC SAAS ENGINE

Introducing Fabrication AI

From customer drawings to reviewed, fabrication-ready quotes—
powered by AI interpretation and a calibrated production engine.

The engine is fast. **Getting data into it is not.**

Fabricators still spend valuable estimator time reading drawings, identifying openings, entering dimensions, checking prices and preparing customer documents.

01

Manual takeoff

Plans and enquiries arrive as PDFs, photos, notes and spreadsheets. Every opening must be interpreted and entered.

02

Slow response

Repetitive data entry delays quotes and reduces the number of opportunities a team can process.

03

Commercial risk

Missed openings, inconsistent selections and incomplete prices can reduce margin or create production rework.

The premium value is not “having AI.” It is moving from enquiry to an accurate draft order with less manual effort.

AI does not replace the engine. It unlocks it.

The application already owns the difficult manufacturing layer. AI becomes a controlled intake and assistance layer around proven calculations.

01

Calibrated geometry

Real profile faces, overlaps, rebates, weld allowances and design topology.

02

Production outputs

Work orders, cutting lists, BOMs, planners, pricing and PDF document packs.

03

Operational data

Products, designs, profile systems, colours, glass, hardware, orders and permissions.

AI contribution

Read, classify, extract, suggest, explain and draft.

Engine authority

Validate, calculate, price, optimize and generate production documents.

One controlled path from drawing to production

Core promise: AI reads the plans. The calibrated fabrication engine does the maths.

AI features customers can **feel and measure**

Plan-to-Quote

Detect openings and dimensions from plan sets, then build a reviewable draft quotation.

FLAGSHIP

Quote Copilot

Create configurations using plain language: "ten white casements, 1200 × 1400."

FAST MVP

Quote Checker

Flag unusual dimensions, missing prices, incomplete selections and low-margin lines.

MARGIN GUARD

Catalogue Import

Read supplier PDFs and spreadsheets, propose mappings and require admin approval before updates.

ENTERPRISE

Proposal Assistant

Turn calculated quotes into clear proposals, scope notes, emails and follow-up messages.

SALES

Demand Insights

Use order history to forecast profile, glass and hardware requirements after enough data exists.

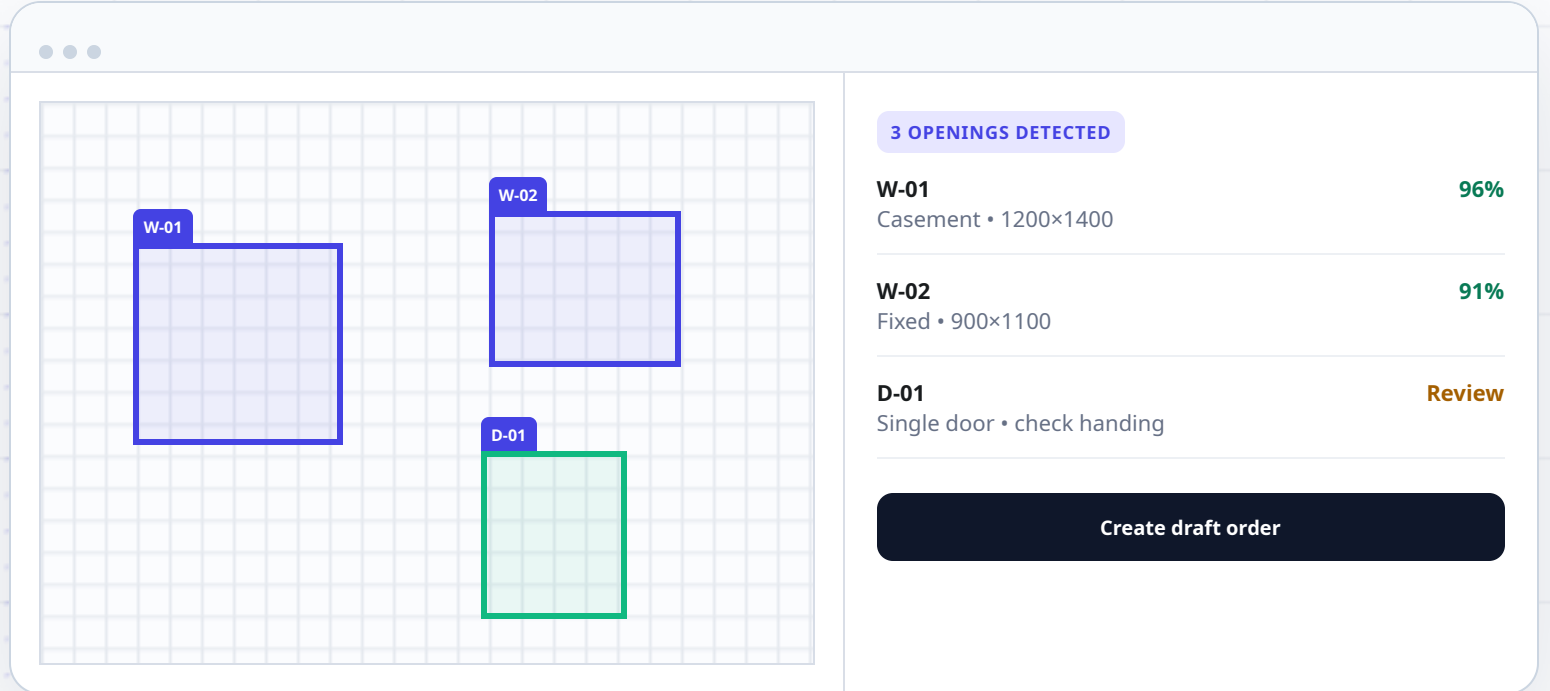

LATER

Plan-to-Production: a first pass in minutes

Review before release

The system highlights every detected opening, links it to extracted data and asks the estimator to resolve uncertainty.

- ✓ Source page and visual location
- ✓ Dimensions and quantity
- ✓ Suggested product and design
- ✓ Confidence and missing-information flags
- ✓ One-click creation of a draft order

3 OPENINGS DETECTED

W-01 Casement • 1200×1400	96%
W-02 Fixed • 900×1100	91%
D-01 Single door • check handing	Review

Create draft order

Designed for fabrication accuracy—not AI theatre

AI INTERPRETATION LAYER

May suggest

- ✓ Opening type and dimensions
- ✓ Matching product or design
- ✓ Customer-facing descriptions
- ✓ Missing information and warnings

Output: structured draft + confidence + source evidence.

DETERMINISTIC AUTHORITY

Must calculate

- ✓ Profile deductions and geometry
- ✓ Glass, gasket and hardware quantities
- ✓ Cutting plans and weld allowances
- ✓ Pricing, labour, markup and VAT

Output: validated quote and production documents.

Every AI-created order remains a draft until a permitted user reviews and approves it.

Price the saved estimator time—not the tokens

FOUNDATION

Standard Core plan

For teams that configure every quote manually.

- ✓ Product configurator
- ✓ Orders and pricing
- ✓ BOM and cutting documents
- ✓ Role-based access

PREMIUM

Fabrication AI

£249–£499 / company / month

For active fabricators that want more quote capacity.

- ✓ Plan-to-Quote allowance
- ✓ Natural-language Quote Copilot
- ✓ Quote and margin checks
- ✓ Proposal generation
- ✓ Usage dashboard

RECOMMENDED

HIGH VOLUME

AI Enterprise

£1,000+ / month

For multi-user, high-volume or custom deployments.

- ✓ High-volume document processing
- ✓ Supplier catalogue onboarding
- ✓ Custom approval workflows
- ✓ Priority support and onboarding

30 hours saved

£900 value

before faster sales response

Illustrative positioning only. Final pricing should be validated through paid pilots and measured customer savings.

Sell a business outcome with **visible proof**

POSITIONING

Upload a drawing. Review the openings. Generate a fabrication-ready quote, BOM and cutting pack.

Support line:

AI reads the plan. Your calibrated engine protects the calculation.

Ideal buyer

Owner, estimator or sales manager at a growing window and door fabricator.

Demo moment

Upload a real customer plan and produce a reviewable draft order live.

Proof metrics

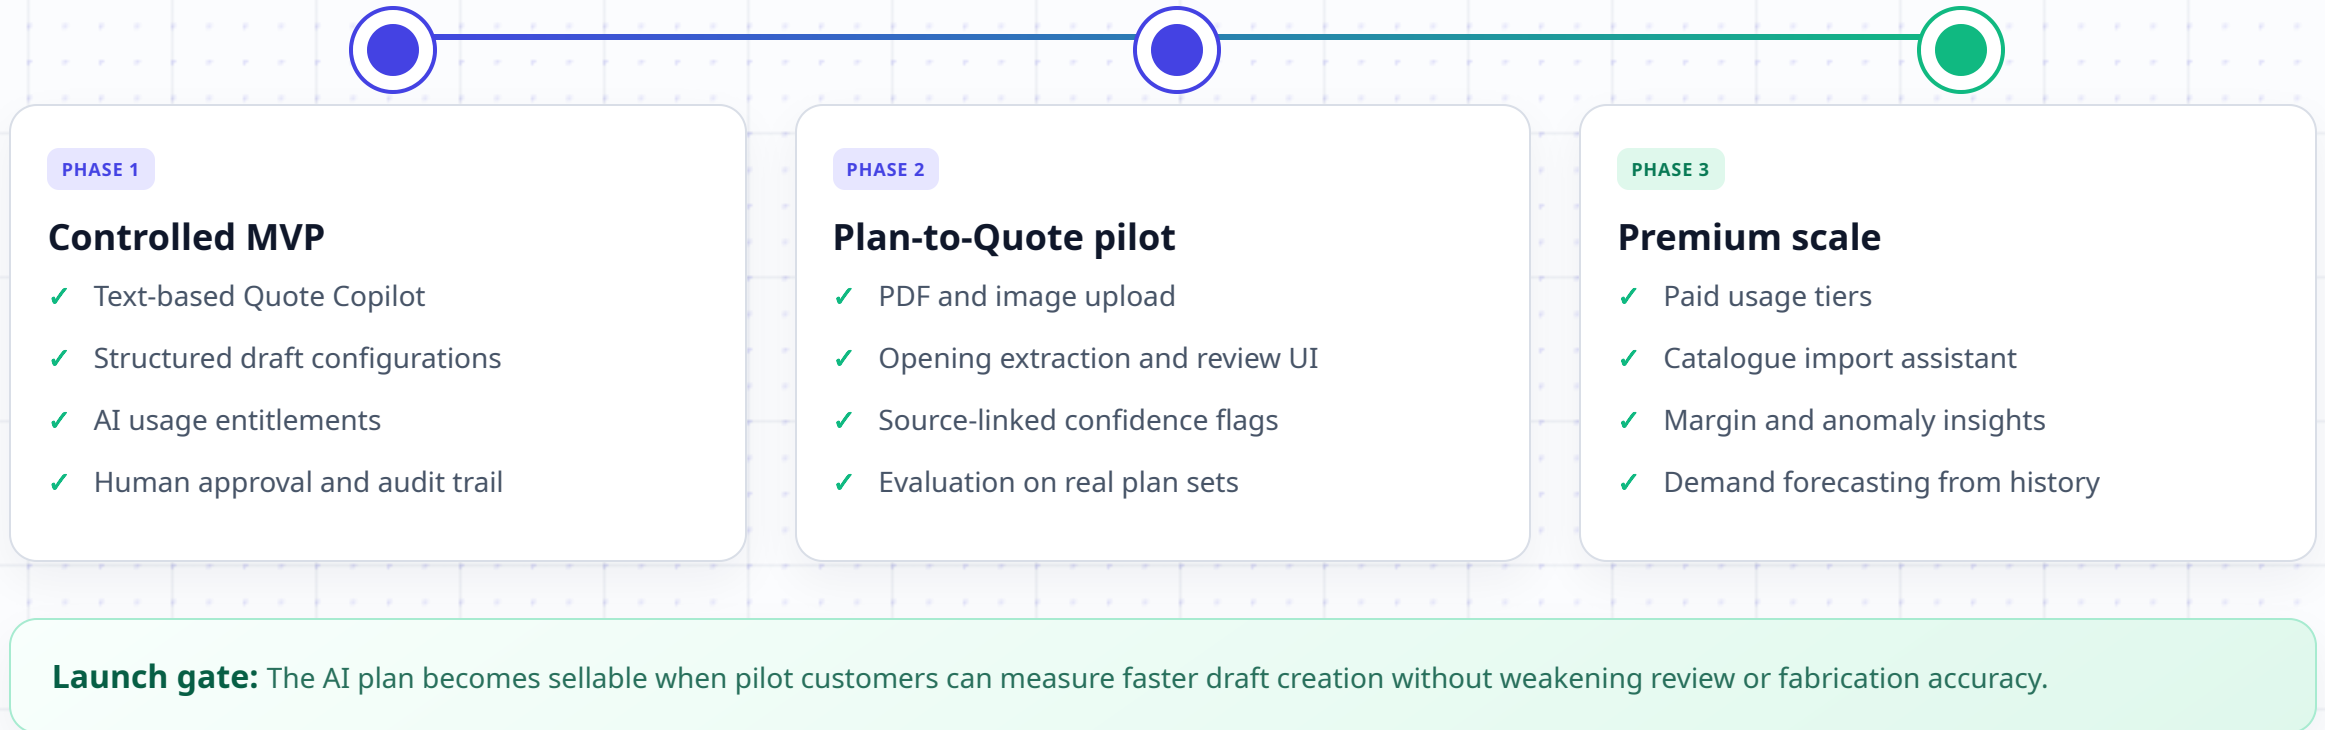

Time to first draft, openings reviewed, corrections required and quotes completed.

Trust message

Human approval, confidence flags, source evidence and deterministic calculations.

Avoid: “100% automatic,” “error-free,” or “replace your estimator.” Premium trust is built by reviewability, not hype.

Launch narrowly, prove accuracy, then expand

THE PROPOSITION

Turn every enquiry into a faster, reviewable path to production.

Fabrication AI combines modern document understanding with the accuracy, pricing and production intelligence already inside the uPVC SaaS Engine.
